

Jason Saldano Jr

Week 2 In-Class Assignment

① Pick a Scenario
~ Vending Machine

② Identify 4-6 Objects

- It know what items it is selling
- It how many items are left in stock
- It can receive payment (cards / cash)
- It can dispense item (products / goods)
- It can tell you the price of items
- It can tell you when something is out of stock

③ So I'll start from the beginning and go in stages. Once you interact with the key pad to see the price of an item. The machine communicate with that specific section to see if that item is in stock or confirmed. It will show the price if it is in stock. If not the item will show out of stock and to please try another item. If communication goes wrong you could either end up pay for an item that isn't in stock or end up getting something you didn't want.

Sometime you can even get your money stolen. This relates to human communication being that something can get lost in ~~trans~~ translation if something isn't accurately explained or described. Mistakes can be made if something doesn't have accurate guidelines or instructions.

④ Reflection

~~How did I decide~~

① How did I decide what to include?

I just thought about what I felt was the most important aspect of how a vending machine works.

② Was it hard to agree on?

No it wasn't hard to agree on.

③ How did you resolve it?

No resolution need simple to decide on.
